

### What is Foxtrot RPA?

Foxtrot RPA is the full product used to create, edit and run scripts. Foxtrot RPA licenses are concurrent and can be shared among users allowing for higher utilization of each license purchased.

### What is FoxBot?

FoxBot is a run-time version of Foxtrot RPA. It can run scripts but cannot create or edit them. FoxBot licenses are concurrent and can be shared among users allowing for higher utilization of each license purchased. FoxBot licenses are offered at a lower price than Foxtrot RPA licenses. This allows your organization to scale up and put many robots to work for you ... today!

### Robotic Workgroups\*

Both Foxtrot RPA and FoxBot products are capable of joining a Robotic Workgroup. A “Robotic Workgroup” is a group of 2 or more robots working on a single central database to process the records as quickly as possible. Each robot looks for the next unprocessed record, grabs that record and runs it through your automated process. An unlimited number of robots can be put to task in a Robotic Workgroup. Simply launch Foxtrot RPA or FoxBot and click the “Join Project” option to join the workgroup and immediately begin helping process the records.
